5 x 7 Dot Character Chip In Glass VFD DN2029DB

- 2 Lines of 20 Characters
- 9mm High 5 x 7 Dot Matrix Font
- Chip In Glass Driver IC
- High Brightness Blue Green Display
- Low Pinout Count
- Wide Operating Temperature

This VF glass includes a 48 bit and a 96 bit serial shift register, latched drivers which connects to the anode and grid electrodes. An external host is required to provide a multiplexing data stream to refresh the display. The signal inputs can be connected to the ports of a CMOS microprocessor. The a.c. filament supply (F1, F2) can be derived from a source of 10KHz to 200KHz. Consult our application notes for further information.

1. Optical filters can provide additional colours.
2. The 20R resistor at the V_{DD2} input is required to prevent current surge during switching.
3. If scanning of the display stops with V_{DD2} applied, the BLK input must be set high to prevent damage to the display
